induce martensitic phase transformations in the surface layer of components.

Anyone familiar with the "grind hardening" process. Apparently grind hardening is an "austnizing" process that can replace flame, induction, furnace or laser hardening. You can use the tool to harden only the areas of the part you need to (cam lobes for example) Another neat thing is since the grind hardening can be done in the multi task machine, it can then finish grind in a single operation.

#### Grind hardening: Correlations between surface ...

Introduction Grind hardening is a process that was first introduced by Bruksmeier et al. [1] who noticed that the generated friction heat can be used as short time heat treatment for the surface zone of the workpiece. In conventional grinding, annealing and tensile residual stresses cause a decrease in wear resistance and increased crack initiation/propagation on hardened steel workpieces

#### Environmental Impact Assessment of Grind-Hardening Process

Grind-hardening is an alternative process that can be used for the simultaneous surface hardening and grinding of metallic components. In this study, Life Cycle Assessment methods are

#### Grind Hardening Process | Konstantinos Salonitis | Springer

This book presents the grind-hardening process and the main studies published since it was introduced in 1990s. The modelling of the various aspects of the process, such as the process forces, temperature profile developed, hardness profiles, residual stresses etc. are described in
