[Model of computation - Wikipedia](#)

In computer science, and more specifically in computability theory and computational complexity theory, a model of computation is a model which describes how a set of outputs are computed given a set of inputs.

This model describes how units of computations, memories, and communications are organized. The computational complexity of an algorithm can be measured given a model of computation.

Out of curiosity, I am trying to identify what model of computation a system I work with is functionally equivalent to, and prove the equivalence. The longer I spend on this problem the more I suspect the system isn't Turing-equivalent. My understanding of Turing Machines and recursively
